

# Hydraulic Propulsion Unit

We offer a standard range of high quality hydraulic propulsion engines. We would be pleased to discuss your hydraulic installation with you and offer technical assistance and a detailed quotation.

Our hydraulic propulsion engine package includes: technical support, an engine mounted Parker Series F12, bent axis, hydraulic piston pump, hydraulic oil cooler, 35 litre hydraulic oil reservoir fitted with Parker suction boost unit, 25 micron filter, directional control

valve with mountings and linkages, an oil level and temperature sight gauge, and a Parker F12, bent axis, hydraulic piston motor. Please note that Hydraulic pipes are an option and can be supplied/ fitted if required.

We can also supply a high quality "Pod" Drive Unit – designed as a heavy duty drive for quick and simple installation that provides a water tight seal "no wet bilges", no maintenance.

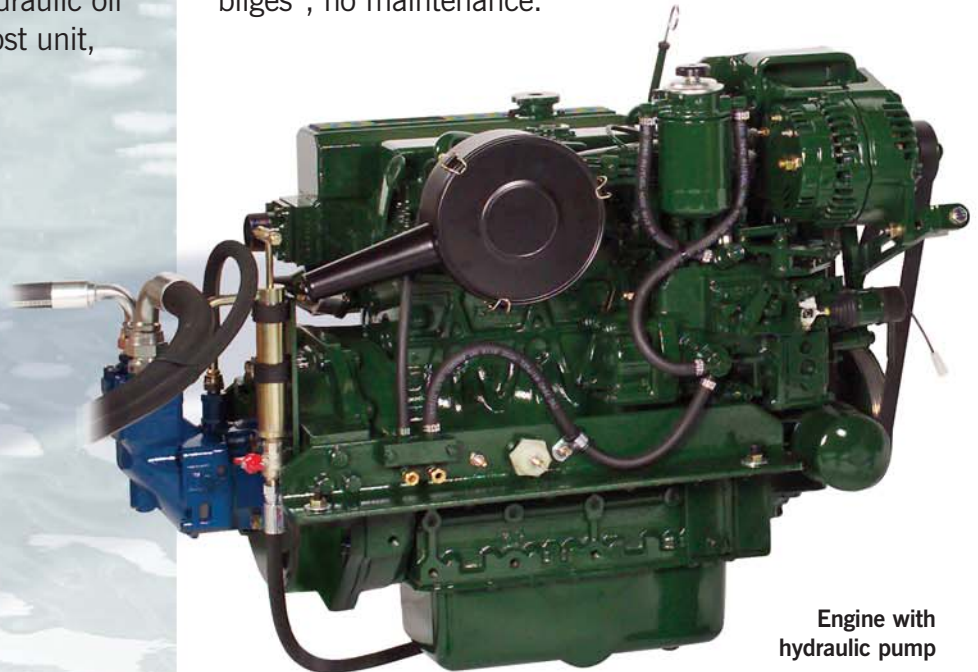

35 litre reservoir with suction boost valve

Hydraulic oil cooler

Directional control valve

Engine with hydraulic pump

Hydraulic motor, pod and mounted propeller
